

The product **ORAK ERP Store R5** is a separately operating module of an entire business system for trade activity management, that is completely compatible with and integrated to the entire business solution for Hotel System management.

Its basic function is to give an account on the activity as it is, and thus to contribute to the more professional and global management.

The product is also applicable for separate stores and markets, but its total power reveals in the management of a chain of objects with a possibility for remote control. The system is very flexible and applicable to the dynamic requirements of the clients. Besides supporting all possible operations and functions of a well organized store management system, it also supports a very powerful analytical device and a flexible report system providing information on conditions and trends.

The work with the product is a true pleasure, as it allows professional business management.
